

Data Science and Machine Learning Course Content

1. Introduction

- a. What is Data Science
- b. Data Science Vs Data Mining
- c. What is Machine Learning?
 - i. Some Basic Terms
 - ii. Types of Machine Learning (Supervised, Unsupervised, and Reinforcement)
- d. Python Installation
 - i. Python IDE
 - ii. Installation of required libraries
 - iii. Jupyter Notebook Interface
- e. Machine Learning Useful Package
 - i. NumPy
 - ii. Pandas
 - iii. Matplotlib

2. Data Pre-Preprocessing

- a. Reading and Modifying a Dataset
- b. Statistics (Mean, Median, Mode, Variance, Standard deviation, Normal Distribution, Uniform Distribution, Covariance)
- c. Missing Values
- d. Outlier Detection
- e. Concatenation
- f. Dummy variable
- g. Normalization

3. Classification

- a. Supervised Learning Models - Introduction and Understanding the Data
- b. K-NN Concepts
- c. K-NN Model Development
- d. K-NN Training Set and Test-Set Creation
- e. Decision Tree Concepts
- f. Decision Tree Model Development
- g. Decision Tree - Cross-Validation
- h. Naive Bayes Concept

- i. Naive Bayes Model Development
- j. Logistic Regression Model Development
- k. Model Evaluation Concepts
- l. Model Evaluation - Calculating with Python

4. Regression

- a. Simple and Multiple Linear Regression Concepts
- b. Multiple Linear Regression - Model Development
- c. Evaluation Metrics - Concepts
- d. Evaluation Metrics - Implementation
- e. Polynomial Linear Regression Model development
- f. Random Forest Concepts
- g. Support Vector Regression Concepts
- h. Support Vector Regression Model Development

5. Clustering

- a. Introduction
- b. K-means Clustering Introduction
- c. K-means Model development
- d. K-means Model Evaluation
- e. DBSCAN Concepts
- f. DBSCAN Model Development
- g. Hierarchical Clustering Concepts
- h. Hierarchical Clustering Model

6. Hyper Parameter optimization (Model Tuning)

- a. Introduction and why Model Tuning
- b. Support Vector Regression - Model Tuning
- c. K-Means - Model Tuning
- d. k-NN - Model Tuning
- e. Overfitting and Underfitting
